## **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: Title changed to: "Wavelength Locker with Liquid Crystal Tunable Filter generating transmitted and reflected outputs."

The following is an examiner's statement of reasons for allowance: Regarding claims 1-18, there is no prior art of record that teaches the wavelength locker of claim 1 especially "a free space tunable filter accepting a tapped signal and producing two signals that add to form a representation of the tapped signal, photodetectors coupled to the tunable filter, said photodetectors being configured to capture each of the signal outputs from said tunable filter.

Regarding claims 19-20, there is no prior art of record that teaches a method of wavelength locking comprising "providing a tunable filter that produces reflected and transmitted signal outputs and measuring the outputs of the tunable filter and generating a wavelength locker feedback signal in response to the information collected from the outputs of the tunable filter."

Singh as previously cited teaches a wavelength locking system with a narrow band power splitter, which accepts a tapped signal and produces two outputs however

Application/Control Number: 10/719,078

Art Unit: 2871

this device is not a "free space tunable filter" as Singh teaches this as a replacement for the traditational etalon /filter arrangements used in the prior art (see figs. 3 and 5).

Liu 6845108 teaches a tunable laser wavelength locker which employs a free space tunable filter however the tunable filter in this case does not generate two outputs (ie transmitted and reflected) where both of these transmitted signals are measured and used to generate a feedback signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phu Vu whose telephone number is (571)-272-1562. The examiner can normally be reached on 8AM-5PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on (571)-272-1787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
